

GET MAXIMUM BENEFIT

The exact system to go from inconsistent to consistent

Bank Nifty · Nifty 50 · Crypto · F&O

// WHAT THIS GUIDE GIVES YOU

- The exact daily routine that builds consistency — session by session
- The 3 numbers to check every single morning before you trade
- How to use your data to eliminate your #1 losing habit in 2 weeks
- The weekly review process that serious traders do — step by step
- How to find your highest EV setup and trade ONLY that for 30 days
- The psychology pattern finder — see your FOMO/Revenge loop in data
- When to graduate from Basic to Pro (the exact signal to look for)

The journal tracks the data.

This guide tells you what to do with it.

THE DAILY ROUTINE — DO THIS EVERY SESSION

Follow this before, during, and after every trading session. Non-negotiable.

BEFORE THE SESSION (5 minutes)

CHECK YOUR DASHBOARD

Open your copy. Go to DASHBOARD. Read these 3 numbers:

→ Win Rate → Profit Factor → Discipline %

If Profit Factor is below 1.0 — reduce your position size today. No exceptions.

READ YOUR LAST COACH REPORT

Look at Section 7 — Action Plan. What were the 4 things?

Those are your rules for today. Not general rules. YOUR specific rules from your data.

SET YOUR DAILY LOSS LIMIT

Before any trade: decide the maximum you will lose today in points.

When that number is hit — close the platform. Walk away. No re-entry.

DURING THE SESSION (every trade)

LOG EVERY TRADE

Do not wait until end of day. Log each trade immediately after exit.

Fill ALL columns. Incomplete rows lower your AI report accuracy.

2-LOSS RULE

After 2 consecutive losses — stop. Close platform. Come back tomorrow.

This one rule prevents 80% of revenge trading. Set it. Keep it.

AFTER THE SESSION (10 minutes)

RUN FULL ANALYSIS

■ AI COACH → Run Full Analysis. Read the updated Coach Report.

Focus only on Section 2 (Killer Mistake) and Section 7 (Action Plan).

CHART ANALYSIS (optional but powerful)

For 1-2 key trades: go to CHART_ANALYSIS. Fill the row.

Run the PA prompt through any free AI. Paste the result. Done.

This builds your price action library over time.

THE 30-DAY SYSTEM **BUILD CONSISTENCY STEP BY STEP**

This is the exact progression. Do not skip phases. Each builds on the previous.

WEEK 1

DAYS 1-7

LOG EVERYTHING — BUILD THE DATA

- Log every trade the moment it closes. Fill every column.
- Do not analyse yet. Just build the dataset.
- Target: minimum 10 trades logged by day 7.
- Run Full Analysis on day 7. Read the report for the first time.
- Your only job this week: be honest with every entry.

WEEK 2

DAYS 8-14

FIX ONE THING — KILLER MISTAKE

- Read Section 2 of your Coach Report — Killer Mistake.
- Pick that ONE habit. Write it on a sticky note near your screen.
- For the next 7 days: track ONLY that habit. Nothing else.
- If it is "Moved Stop Loss" — set hard stop. Never move it.
- If it is "Revenge Trade" — 2-loss rule. Platform closes. Done.
- Run Full Analysis again on day 14. Has that habit reduced?

WEEK 3

DAYS 15-21

SETUP FOCUS — HIGHEST EV ONLY

- Go to SETUP_ANALYSIS tab. Find your highest EV setup.
- For the next 7 days: ONLY take that setup. Nothing else.
- This feels restrictive. It is supposed to. That is the point.
- Every trade you skip is one less mistake in your data.
- Your win rate and PF will improve. The data will show it.

WEEK 4

DAYS 22-30

WEEKLY REVIEW — CLOSE THE LOOP

- Do a Weekly Review every Friday (■ AI COACH → Run Weekly Review).
- Read all 7 sections. Focus on: What Went Wrong + Next Week Rules.
- Write your 3 rules for next week based on the AI output.
- Post them somewhere visible before Monday.
- By day 30: compare your Week 1 grade vs Week 4 grade.
- You should see a measurable improvement in at least 2 KPIs.

THE 3 NUMBERS —CHECK THESE EVERY MORNING

These 3 numbers from your Dashboard tell you everything you need to know before trading.

01 PROFIT FACTOR

The most important number in trading.

PF above 1.5 →Trade normally at your standard size.

PF 1.0 to 1.5 →Trade at 50% of your standard size.

PF below 1.0 →Do not trade live. Review data only.

The market does not care about your confidence. PF does not lie.

02 DISCIPLINE %

Tracks how often you follow your own rules.

Above 80% →Your system is working. Keep following it.

60% to 80% →Identify which rule you break most. Fix just that.

Below 60% →Your rules are unclear or too many. Simplify to 3 rules.

Low discipline % always precedes a drawdown. It is the warning signal.

03 WIN RATE

Confirms your setup selection is valid.

Above 60% →Your setup recognition is strong. Stay selective.

50% to 60% →Acceptable. Check if Profit Factor compensates.

Below 50% →Something is wrong with entry timing or setup selection.

Win rate alone means nothing. Always read it alongside Profit Factor.

WHEN TO UPGRADE TO PRO ~~THE~~ THE EXACT SIGNAL

The Basic journal builds your foundation. Here is the moment to go Pro.

SIGNAL 1

You have logged 20+ trades and your Profit Factor is above 1.0.

→ You have a real edge. Pro gives you the AI Coach Report to sharpen it further.

SIGNAL 2

You know your top mistake but you keep doing it.

→ The Pro AI Coach names it every single session and gives you a specific action plan to break the loop.

SIGNAL 3

You want to know which setup actually makes you money.

→ Pro's Setup Analysis ranks every setup by Expected Value. You will know exactly what to trade more.

SIGNAL 4

You want to track your emotions systematically.

→ Pro's Psychology Log shows your emotion frequency, mistake patterns, and market condition win rates in charts.

SIGNAL 5

You want a weekly written review instead of just numbers.

→ Pro's Weekly Review generates 7 coaching sections — what worked, what failed, what to focus next week.

Ready for the AI Pro Edition?

8-section AI coaching report · Weekly Review · Setup Analysis
