

THE COMPLETE GUIDE TO

20 EMOTIONAL MISTAKES

EVERY TRADER MAKES

And exactly how to eliminate them — one by one.

// THE 20 MISTAKES COVERED:

- | | |
|---------------------------|------------------------|
| 01 FOMO Entry | 02 Revenge Trading |
| 03 Moving Stop Loss | 04 Early Exit |
| 05 Late Exit | 06 Overtrading |
| 07 Oversizing | 08 Trading When Tired |
| 09 Trading After Big Win | 10 Ignoring HTF |
| 11 Breaking Rules | 12 No Plan |
| 13 Checking P&L Mid-Trade | 14 Trading News |
| 15 Comparing P&L | 16 Not Reviewing |
| 17 Anchoring to Entry | 18 Trading to Prove |
| 19 Ignoring Daily Limit | 20 Not Trusting System |

This is not a lecture. It is a mirror.

Read each one. Ask yourself: how many of these happened this week?

01

FOMO ENTRY

Entering a trade because you saw it move — not because you planned it.

You didn't watch it. You chased it. That is not a trade. That is gambling.

Fix: If you didn't have it on your watchlist before market open, you cannot enter.

02

REVENGE TRADING

Taking a trade to 'get back' money you just lost.

The market does not owe you recovery. It does not care about your loss.

Fix: 2 consecutive losses = trading day ends. Close platform. Walk away.

03

MOVING THE STOP LOSS

Widening your stop because 'it will come back.'

It won't. And even if it does once, the habit will destroy you over 100 trades.

Fix: Hard stop at entry. Set it. It is a contract. Never move it.

04

EARLY EXIT

Exiting a winning trade before it hits your target because you fear losing profit.

You are letting fear manage your trade instead of your plan.

Fix: Set target before entry. Do not look at the trade until it hits stop or target.

05

LATE EXIT

Holding a losing trade past your stop hoping it reverses.

Hope is not a strategy. Every point past your stop is a broken rule.

Fix: Your stop is your maximum acceptable loss. When hit — exit. No thinking.

06

OVERTRADING

Taking 8 trades on a day your strategy gives 2 setups.

Boredom, FOMO and the need to 'do something' are not setups.

Fix: Max 3 trades per day. Quality over quantity. Every time.

07

OVERSIZING

Using a position size that makes you emotional about the outcome.

If you are watching every tick, your size is too large for your psychology.

Fix: Risk only what you can lose without it affecting your next trade decision.

08

TRADING WHEN TIRED

Your decision quality degrades with fatigue — scientifically proven.

A tired trader moves stop losses, revenge trades, and ignores rules.

Fix: Below 6 hours sleep = no live trading. Paper trade or don't trade.

09

TRADING AFTER A BIG WIN

Overconfidence after a large win leads to oversizing and sloppy entries.

You start believing you are better than you are. The market corrects that belief.

Fix: After a big win — reduce position size by 50% for the next session.

10

IGNORING HIGHER TIMEFRAME

Entering on 5-minute while the 15-minute and 1-hour are against you.

You are fighting the structure. You will lose more than you win.

Fix: Check HTF structure before every entry. If it conflicts — don't trade.

11 BREAKING YOUR OWN RULES

Taking a trade you know breaks your system rules — then justifying it.

The justification voice is your biggest enemy. It sounds reasonable. It is not.

Fix: Write your rules. Before entry — ask: does this pass every rule? If no — skip.

12 NOT HAVING A PLAN

Entering a trade without a defined entry, stop, target and reason.

Trading without a plan is donating money to traders who have one.

Fix: No plan = no trade. Takes 2 minutes. Write it before you click buy or sell.

13

CHECKING P&L MID-TRADE

Looking at your unrealised P&L while in a trade causes emotional decisions.

You exit early when green. You hold when red. Both are losing behaviours.

Fix: Set stop and target as hard orders. Close the P&L column. Walk away.

14

TRADING NEWS WITHOUT PREPARATION

Entering into a high-impact news event without understanding the risk.

News creates irrational moves that invalidate technical analysis.

Fix: Check economic calendar every morning. Avoid trading 15 min before/after major news.

15

COMPARING YOUR P&L TO OTHERS

Seeing someone else's profit screenshot and increasing your size to match.

You don't see their losses. You don't know their capital. Comparison destroys discipline.

Fix: Your benchmark is your own historical average. Nothing else matters.

16

NOT REVIEWING YOUR TRADES

Taking 5 trades, not logging them, and doing the same thing next week.

Without review, you repeat the same mistakes indefinitely. Data breaks the loop.

Fix: Log every trade. Run your AI Coach Report after every 5 trades. Read it.

17

ANCHORING TO YOUR ENTRY PRICE

Holding a losing trade because you 'need' to get back to your entry price.

The market does not know where you entered. Your entry price is irrelevant.

Fix: The only question is: would I enter this trade right now at this price? If no — exit.

18

TRADING TO PROVE SOMETHING

Trading to prove to yourself or someone else that you can make money.

This emotional fuel distorts every decision. You take more risk than your plan allows.

Fix: Your only job each session is to follow your rules. The money is a byproduct.

19

IGNORING YOUR DAILY LOSS LIMIT

Continuing to trade after you have hit your pre-set daily loss limit.

You set the limit for a reason. The version of you that set it was calmer and wiser.

Fix: When limit is hit — platform closes. No exceptions. Honour the rule you made.

20

NOT TRUSTING THE SYSTEM

Taking only half your planned size because you 'have a bad feeling.'

Or skipping a valid setup because of recent losses. The system needs sample size to work.

Fix: Trust your system for 20 consecutive trades before judging it. Inconsistency is the leak.

How many of these 20 did you make this week?

If it is more than 3 — you need data, not motivation.

The AI Trading Journal Coach shows you your patterns.

tradingmindset2.gumroad.com/l/ttm-pro · **1,499 one-time**

THE SOLUTION IS NOT WILLPOWER.

Willpower runs out. Data does not. When you can see exactly which mistake is costing you the most — in numbers — elimination becomes a focused exercise, not a vague intention.

THE AI PRO JOURNAL TRACKS:

- Your top mistake — % frequency across all trades
- The emotion that appears before your worst trades
- Which setup has the highest Expected Value
- Your discipline score — rules followed per session
- Your actual Profit Factor (not what you think it is)
- An Action Plan for your next session — generated from YOUR data
